Certification

UL/FCC: This equipment complies with UL and FCC

Warnings and Hazards

WARNING! ELECTRIC SHOCK

Opening the BDA (bi-directional amplifier) could result in electric shock and may cause severe injury.

WARNING! EXPOSURE TO RF

Working with the repeater while in operation, may expose the technician to RF electromagnetic fields that exceed FCC rules for human exposure. Visit the FCC website at <http://www.fcc.gov/oet/rfsafety> to learn more about the effects of exposure to RF electromagnetic fields.

WARNING! DAMAGE TO EQUIPMENT

Operating the BDA with antennas in very close proximity facing each other could lead to severe damage to the repeater.

RF EXPOSURE & ANTENNA PLACEMENT

Actual separation distance is determined upon gain of antenna used.

Please maintain a minimum safe distance of at least 8inch while operating near the donor and the server antennas. Also, the donor antenna needs to be mounted outdoors on a permanent structure.

WARRANTY

Opening or tampering the BDA will void all warranties.

CAUTION: REPEATER SHOULD BE INSTALLED AS CLOSE AS POSSIBLE TO POWER SOURCE.

CAUTION: THIS REPEATER IS FOR INDOOR USE ONLY AND SHOULD BE LOCATED INSIDE OF BUILDING.

CAUTION: RISK OF EXPLOSION IF BATTERY ON CONTROLLER BOARD IS REPLACED WITH AN INCORRECT TYPE.

Mounting Repeater

Masonry Wall

1. Using a pencil, mark the location of each of the mounting bracket's four mounting holes on the wall.
2. Drill holes in the wall at the locations marked in step 1.
3. Set the anchors in the wall using a hammer.
4. Locate the four mounting bolts and place a lock washer and flat washer on each bolt.
5. Place the mounting bracket over the four holes with anchors, making sure that the washers are on the repeater side of the mounting bracket. Tighten bolts until secure.

**<Figure 1> Mounting the Repeater
on a Masonry Wall**

Mounting Repeater

Wood-Framed Wall

1. It is recommended to first attach a sheet of plywood to the wall. The sheet of plywood should be anchored to the studs in the wall.
2. Using a pencil, mark the location for each of the mounting bracket's four mounting holes on the plywood.
3. Place the mounting bracket over the four lag screws heads.
4. Thread a lag screw at the positions marked in step 1.

**<Figure 2> Mounting the Repeater
on a Wood-Framed Wall**

Hanging and Grounding

1. Hang the Repeater from the mounting bracket.
2. Locate the four Bracket Sems Screws with installed washers. Tighten bolts until secure.
3. Locate the ground lug on the underside(or side) of the repeater.
4. Crimp the ground cable to the ground lug.
5. Route the free end of the ground cable to an approved(per local code or practice) ground source.

CAUTION

Ground cable must be properly grounded to provide both EMI and voltage surge protection for the repeater.

**<Figure 3> Hanging and Grounding
the Repeater**

Position Antenna

- Customer specifications should be followed for positioning the antennas properly.

<Figure 4> An installer is directing Donor Antenna to nearby BTS to receive strong input signal.

WiMAX Repeater External Port Design

<Figure 5> ANT Port Display

<Figure 6> Port Display (Bottom side)

NO	PORT	NO	PORT
①	DONOR ANT PORT	④	AC POWER PORT

③	DC POWER PORT	⑥	ETHERNET PORT

<Figure 7> WIMAX_33dBm External Port Title

Cable Connections

• Connect Donor and Server Antennas

CAUTION

Do not connect or disconnect cable from ANT port when power is ON

<Figure 8> Donor ANT Port Connection

<Figure 9> Server ANT Port Connection

WiMAX Repeater External Design

<Figure 10> WiMAX Repeater External Design

Connecting Power Cable

<Figure 11> AC Power Port Connection

Web UI

- Before connecting to repeater, disable wireless networking functions and remove wireless broadband card.
- Connect Ethernet Crossover cable from repeater to laptop.

<Figure 12> Ethernet Port

Connecting to Web UI

1. Start->Control Panel->Network and Internet Connections

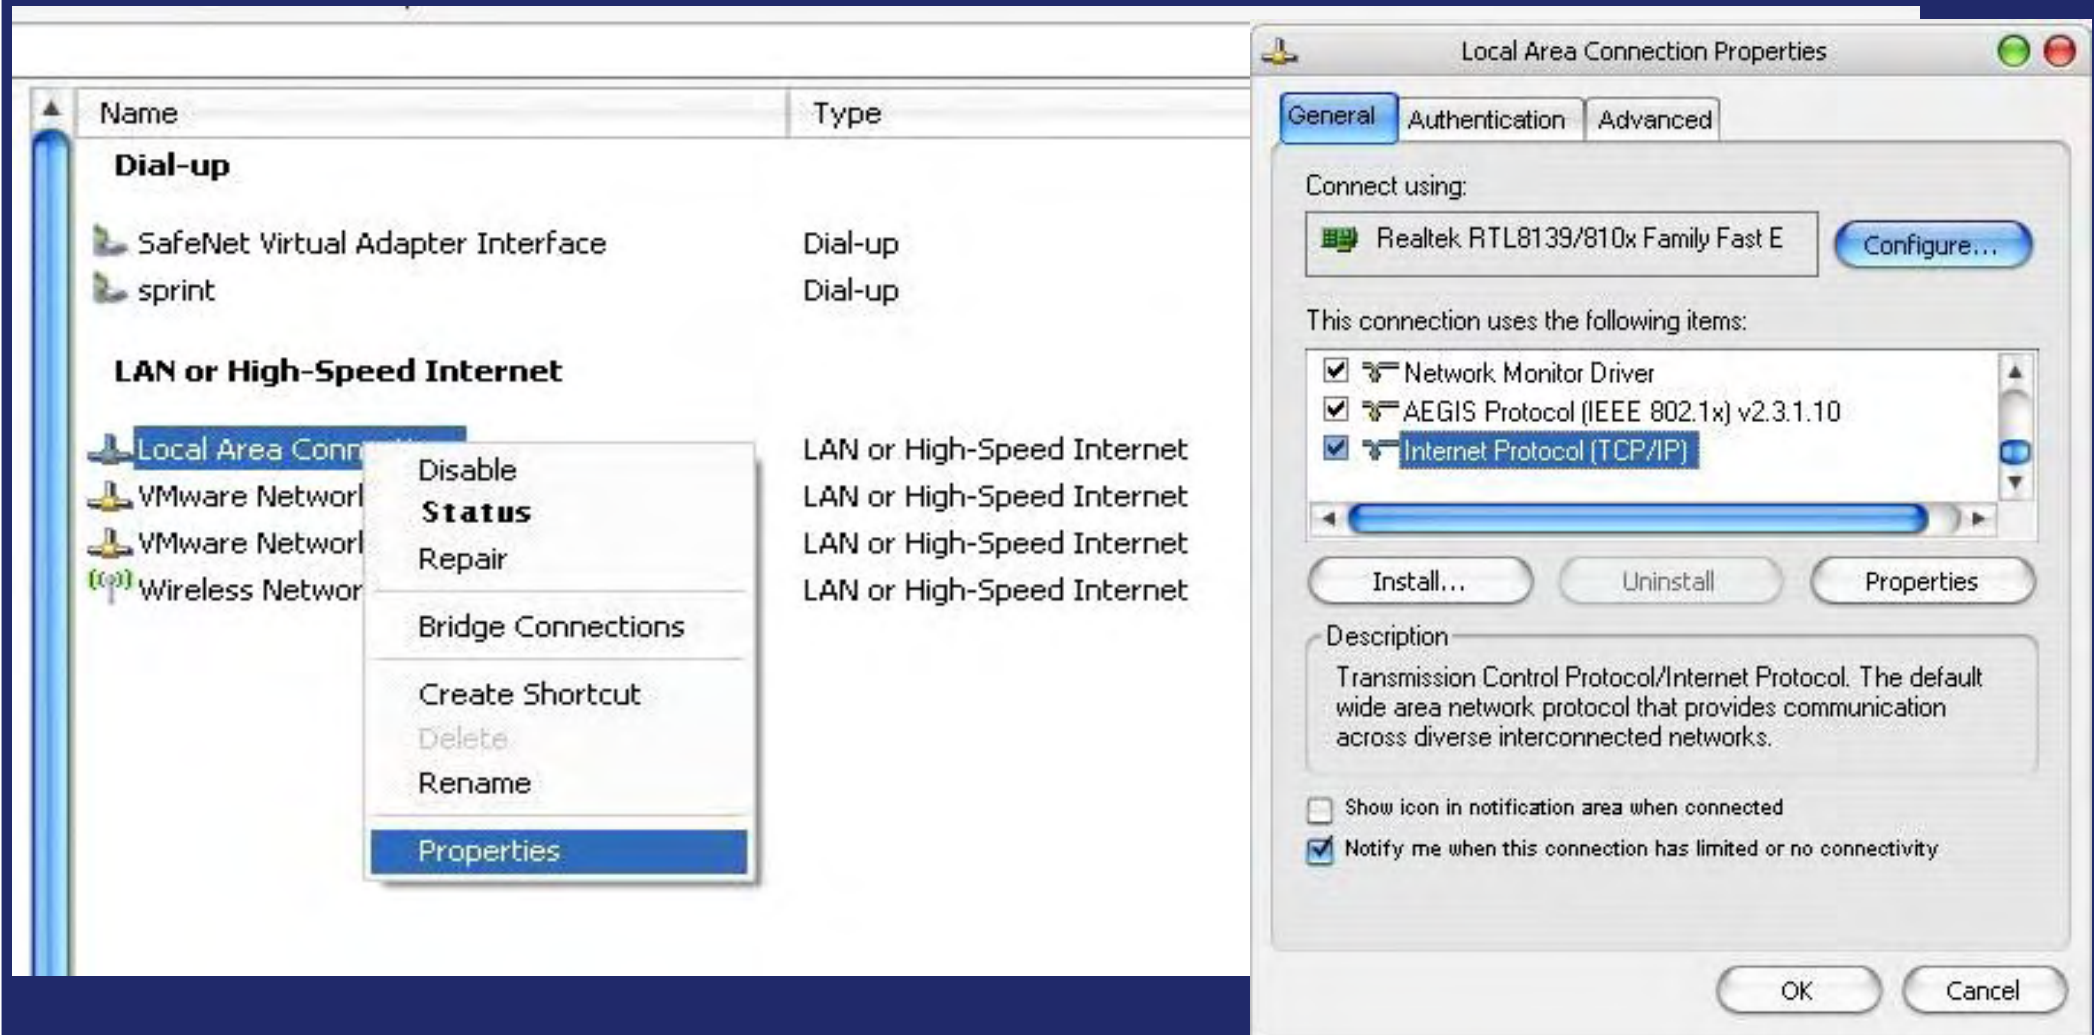

CAUTION

Disable wireless connections and remove wireless broadband card.

Connecting to Web UI

2. Right click Local Area Connections and choose Properties
3. Click Internet Protocol (TCP/IP) on General tab and click Properties

On General Tab

4. Choose ***“Obtain an IP address automatically”***
5. Choose ***“Obtain DNS server address automatically”***
6. Click ***“OK”*** to close Properties
7. Click ***“OK”*** to close Properties

Connecting to Web UI

8. Right click Local Area Connections and choose Status

Verify Assigned IP Address

Repeater's IP address

9. Click on "Support" tab.
10. Verify assigned Default Gateway at local connection.
(If IP address is not assigned, click repair)
11. Close all windows when finished.

Internet Explorer Option Settings

- Proceed step by step as indicated in the following slides to delete all temporary internet files and records.

1. Open Internet Explorer -> Tools -> Internet Options

Browser History Options

- On the “General” tab,
In the “Temporary Internet Files” section:*
- 2. Click “Delete Cookies” → “OK”*
 - 3. Click “Delete Files” → “OK”*
 - 4. Click “OK”*

Login Screen

WiMAX RF - Microsoft Internet Explorer

WiMAX 30dBm Indoor Repeater

Login

Cascade code :

Serial No:

S/W Version:

Longitude/Latitude:

User Name Password

192.168.1.1

Enter Default Gateway's IP address into address bar as previously described, you will be redirected to Login. Default User Name is 'admin', and default Password is 'admin'. You may need to change password as described in the User Management section. Cascade Code and Longitude/Latitude will initially be blank, you can input Cascade Code and Longitude/Latitude as described in the Communications Configuration section.

List Menu

- After you log in, you can see various menu page links related to the equipment.

Status Page

- Default D/L and U/L are set at minimum Gain.
- The default values in various fields will differ with different models of WiMAX Repeaters.
- In order to view other pages, you can click the desired menu on the top-left corner of all pages.
- Changes can be made on the Status Page. This page is for checking the repeater's conditions and settings.

WiMAX 30dBm Indoor Repeater

Communications Configuration

Cascade code :

Serial No:

S/W Version:

Longitude/Latitude:

LAN port IP address (RJ45 port for local access)

Obtain an IP address automatically: ☒ DHCP ☐ STATIC

IP address:

Netmask:

Gateway:

DNS Server:

DHCP Server:

Outgoing Heartbeat IP address (UDP/SNMP):

SNMP Community:

Delay Alarm Reporting Minutes: min

System Reset Interval: hour

Heartbeat Port:

In the line <Obtain IP address automatically>
"Static" means connection using a fixed IP.
"DHCP" means connection using DHCP, where

If "DHCP Server" is "OFF", then the repeater will run as a DHCP client.

If "DHCP Server" is "ON", then the repeater will run as a DHCP server.

If "DHCP Server" is "AUTO", then the repeater will run as a DHCP client first, and then in case the repeater cannot get an IP address from an external DHCP server, the repeater will run as a DHCP server.

Communications Configuration

- In case that screen resolution is 1024 x 768, you may need to use scroll bars to view all. The installer can input Cascade Code into Repeater ID field, and change current time (see last 2 fields). Changes will not be take effect until you click “Apply” button.

WIMAX RF - Microsoft Internet Explorer

Address: http://192.168.1.1/cgi-bin/html.cgi?function=communications

User Management

- Click on the User Management link.
- On this page you can create and delete users, change passwords, and assign authorities to individual users.
- Read/Write Authority means that the user can change various values.
- Super User is very similar to an Administrator account.
- **Caution: DO NOT DELETE 'admin'.**

The screenshot shows a web browser window titled "WiMAX RF - Microsoft Internet Explorer". The address bar displays "http://192.168.1.1/cgi-bin/html.cgi?function=usermanagement". The page layout includes a left sidebar with a menu of configuration options: Logout, Status, RF Configuration, Alarm Configuration, Communications Configuration, User Management (highlighted), Alarm Logs, Logs, Troubleshooting, Remote Software Upgrade, and System Reset. The main content area is titled "WiMAX 30dBm Indoor Repeater" and "User Management". It contains several input fields: Cascade code, Serial No. (0), SW Version (1.4), and Longitude/Latitude. Below these is a form for creating or modifying a user, with fields for User (Must be 5-8 characters), Password (Must be 5-8 characters), Password confirm, and Authority (Read). There are "Register" and "Reset" buttons. At the bottom, there is a list of users with "admin" visible, and a "Delete" button.

Alarm Logs

- Click on the Alarm Logs link.
- You can see Alarm Logs regarding Web UI operation. Alarm Logs will maintain a history of up to 30 operations.

The screenshot shows a Microsoft Internet Explorer window titled 'WiMAX RF - Microsoft Internet Explorer'. The address bar displays 'http://192.168.1.1/cgi-bin/html.cgi?function=alarmlogs'. The page layout includes a left-hand navigation menu with links such as Logout, Status, RF Configuration, Alarm Configuration, Communications Configuration, User Management, Alarm Logs (selected), Logs, Troubleshooting, Remote Software Upgrade, and System Reset. The main content area features a header with 'WiMAX 30dBm Indoor Repeater' and 'Alarm Logs'. To the right of the header are input fields for Cascade code, Serial No. (0), SW Version (1.4), and Longitude/Latitude. Below the header is a table of alarm logs.

Number	Name	Status	Last Triggered
1	DC_ALARM	Green	01/01/1970 00:44:57

Troubleshooting Guide

- Click on the Troubleshooting link.
- You can refer to this page for a general troubleshooting guide.
- In case that screen resolution is 1024 x 768, you may need to use scroll bars to view all.

The screenshot shows a web browser window titled "WiMAX RF - Microsoft Internet Explorer". The address bar displays "http://192.168.1.1/cgi-bin/html.cgi?function=troubleshooting". The page layout includes a left sidebar with navigation links: # Logout, # Status, # RF Configuration, # Alarm Configuration, # Communications Configuration, # User Management, # Alarm Logs, # Logs, # Troubleshooting (highlighted), # Remote Software Upgrade, and # System Reset. The main content area is titled "WiMAX 30dBm Indoor Repeater" and "Trouble - Shooting". It contains input fields for "Cascade code", "Serial No: 0", "SW Version: 1.4", and "Longitude/Latitude:". Below this is a table with troubleshooting steps for various issues.

Internal LED Display has no lights on	1. Power Cable is disconnected	1. Check power supply cable
No signal from Repeater (No Output LED's)	1. Internal Data cable connection is loose or damaged 2. Defective RF cabling or loose connection 3. When in shutdown 4. Bad antenna	1. Verify external power supply 2. Verify that internal power supply switch is turned ON 3. Troubleshoot RF cabling and connections 4. Re-Boot the repeater 5. Troubleshoot Antenna
Repeater Shut-Down	Time-Sync alarm	1. Check LED on Time-Sync Module 2. D/L LNA Unit replacement
	VSWR alarm	1. Reboot repeater 2. Check Service ANT connection 3. PAM Unit replacement
	Oscillation alarm	1. Check setup levels 2. Reboot repeater 3. Reset default values 4. NMS Unit replacement
	Uplink over-output alarm	1. Check setup level 2. Reboot repeater 3. Reset default values 4. NMS Unit replacement

Software Upgrade

- Click on the Remote Software Upgrade link.
- In case that software upgrade is needed, you should use this page.
- Click Browse button to select the file to upgrade from the laptop.

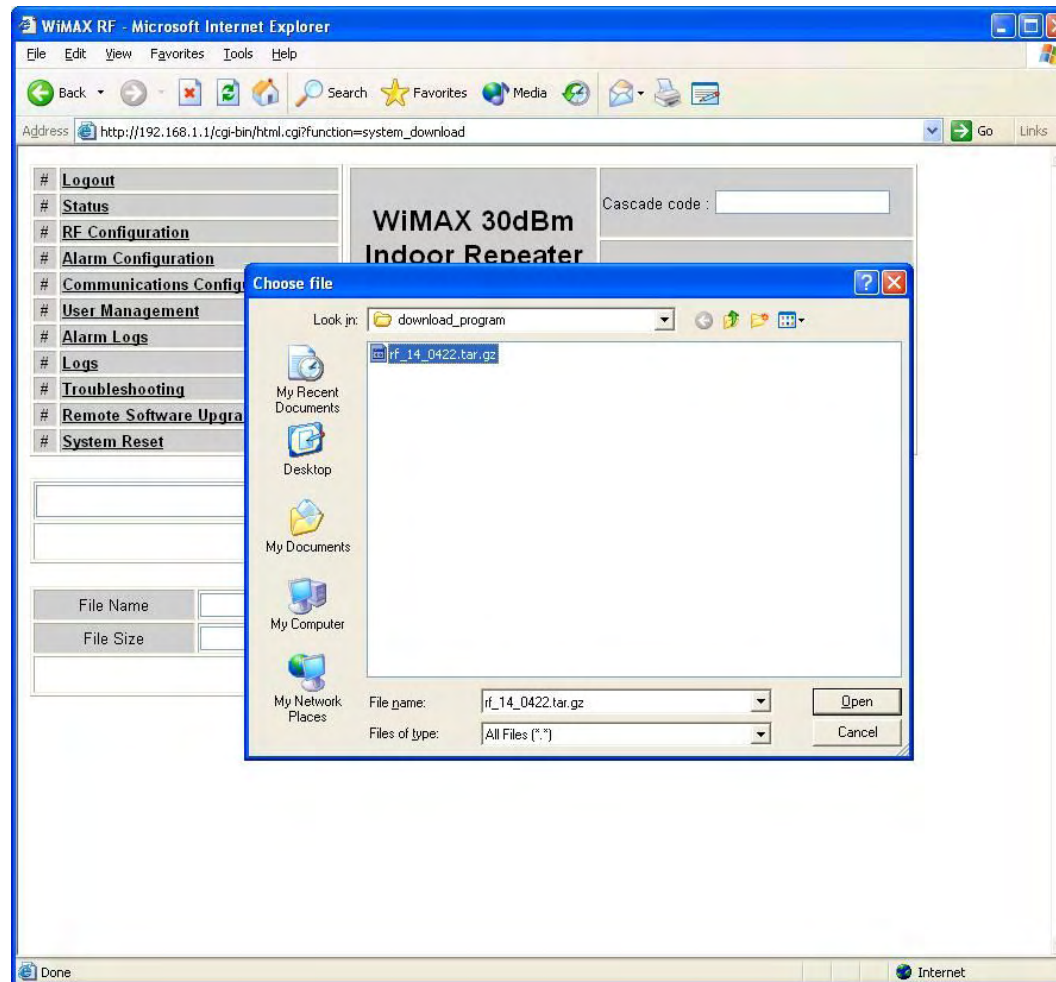

The screenshot shows a Microsoft Internet Explorer window titled "WiMAX RF - Microsoft Internet Explorer". The address bar displays "http://192.168.1.1/cgi-bin/html.cgi?function=system_download". The page content is divided into several sections:

- Left Navigation Menu:** A list of links including Logout, Status, RF Configuration, Alarm Configuration, Communications Configuration, User Management, Alarm Logs, Logs, Troubleshooting, Remote Software Upgrade (highlighted), and System Reset.
- Central Content Area:**
 - WIMAX 30dBm Indoor Repeater:** A header for the device type.
 - Remote Software Upgrade:** The main section title.
- Form Fields:**
 - Cascade code:
 - Serial No:
 - S/W Version:
 - Longitude/Latitude:
- File Upload Section:**
 - A text input field followed by a "Browse..." button.
 - An "Upload" button.
 - Fields for "File Name" and "File Size" with corresponding input boxes.
 - An "Upgrade" button.

The status bar at the bottom shows "Done" and "Internet".

Software Upgrade

- Choose the file to upgrade provided by GST. After you choose the file, click “upload” to send the file from your laptop to the Repeater.
- **Be careful not to unplug the crossover Ethernet cable during software upgrade.**

Software Upgrade

- After uploading is finished, verify that the File Name and the File Size is correct, click “Upgrade” button. Installer should wait about 2 minutes for upgrade to initialize.
- User may then be prompted to log back in to the Repeater.

Software Reset

- A software reset is a “soft reboot” of the repeater. To reset the software, click on ‘Software Reset’ and then click ‘Yes’ to reset the software.
- Resetting the software is a good way to clear current alarms.

WIMAX RF - Microsoft Internet Explorer

Address: <http://192.168.1.1/cgi-bin/html.cgi?function=reset>

<ul style="list-style-type: none"> # Logout # Status # RF Configuration # Alarm Configuration # Communications Configuration # User Management # Alarm Logs # Logs # Troubleshooting # Remote Software Upgrade # System Reset 	WIMAX 30dBm Indoor Repeater	Cascade code : <input type="text"/>
	Reset	Serial No: <input type="text" value="0"/>
		SW Version: <input type="text" value="1.4"/>
		Longitude/Latitude: <input type="text"/>

Are you sure you want to reset this repeater ?

[Yes](#) [No](#)

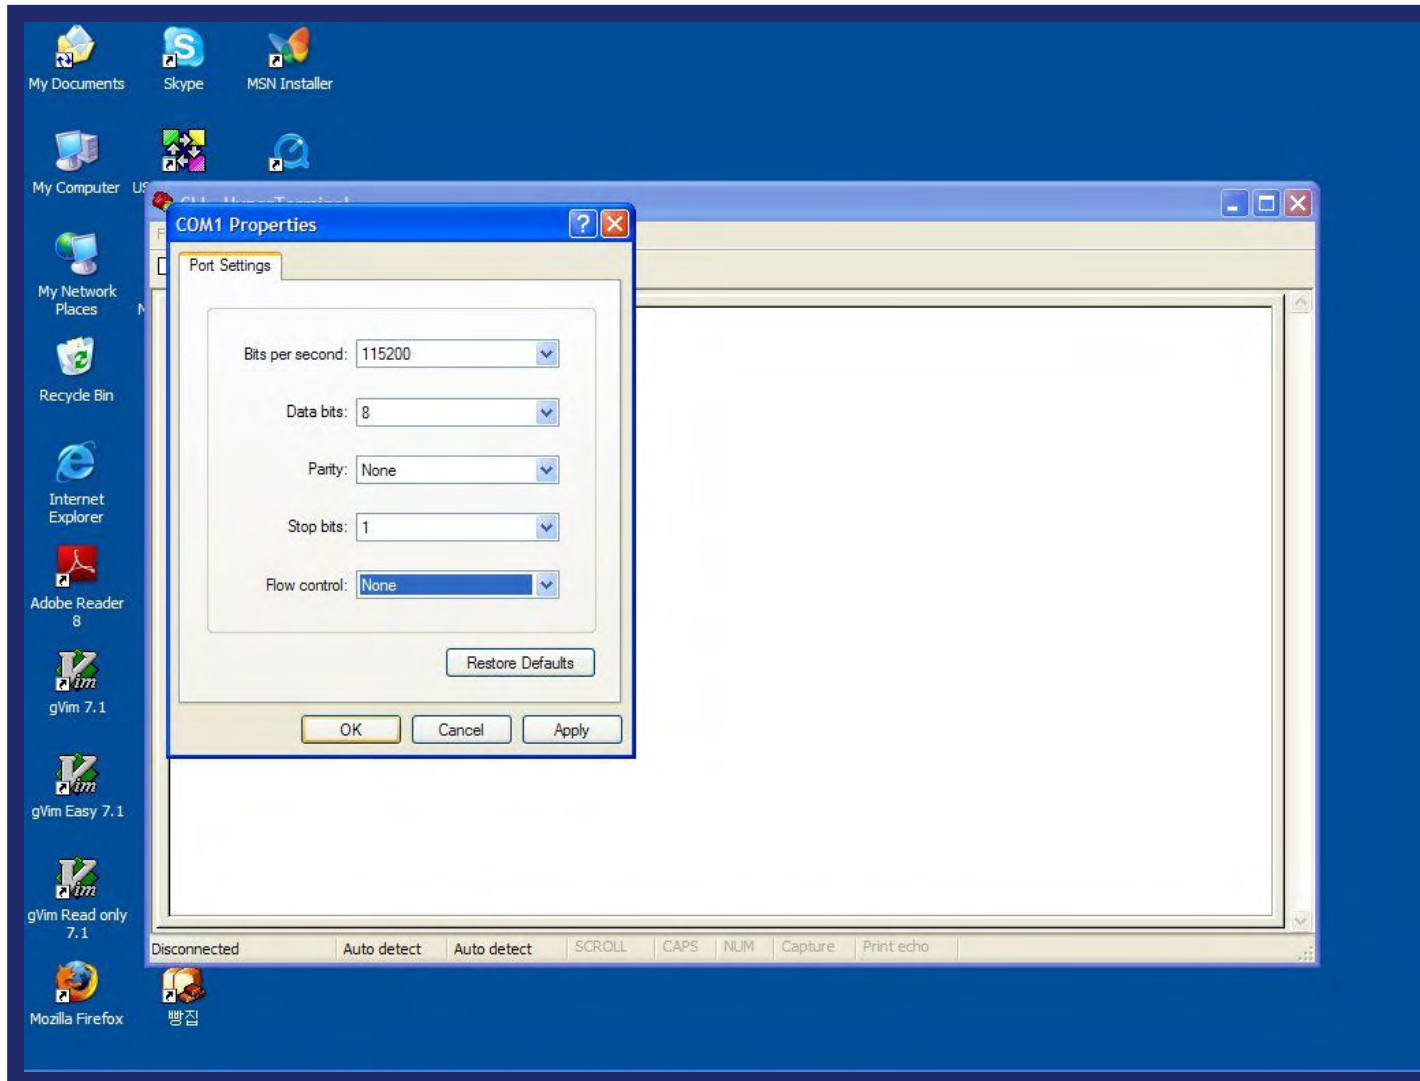

CLI (Command Line Interface)

- In case that you cannot reach Web UI, you should use CLI. Connect the Repeater's CLI port to your laptop's serial port using RS-232 cable. In case that your laptop does not have a serial port, you may need to use USB to Serial conversion cable. Caution: RS-232 cable or USB to Serial conversion cable is not provided with the equipment. After connection, you can access CLI using HyperTerminal.
- To open HyperTerminal, click "Start", then "Accessories", then "Communications", then "HyperTerminal".

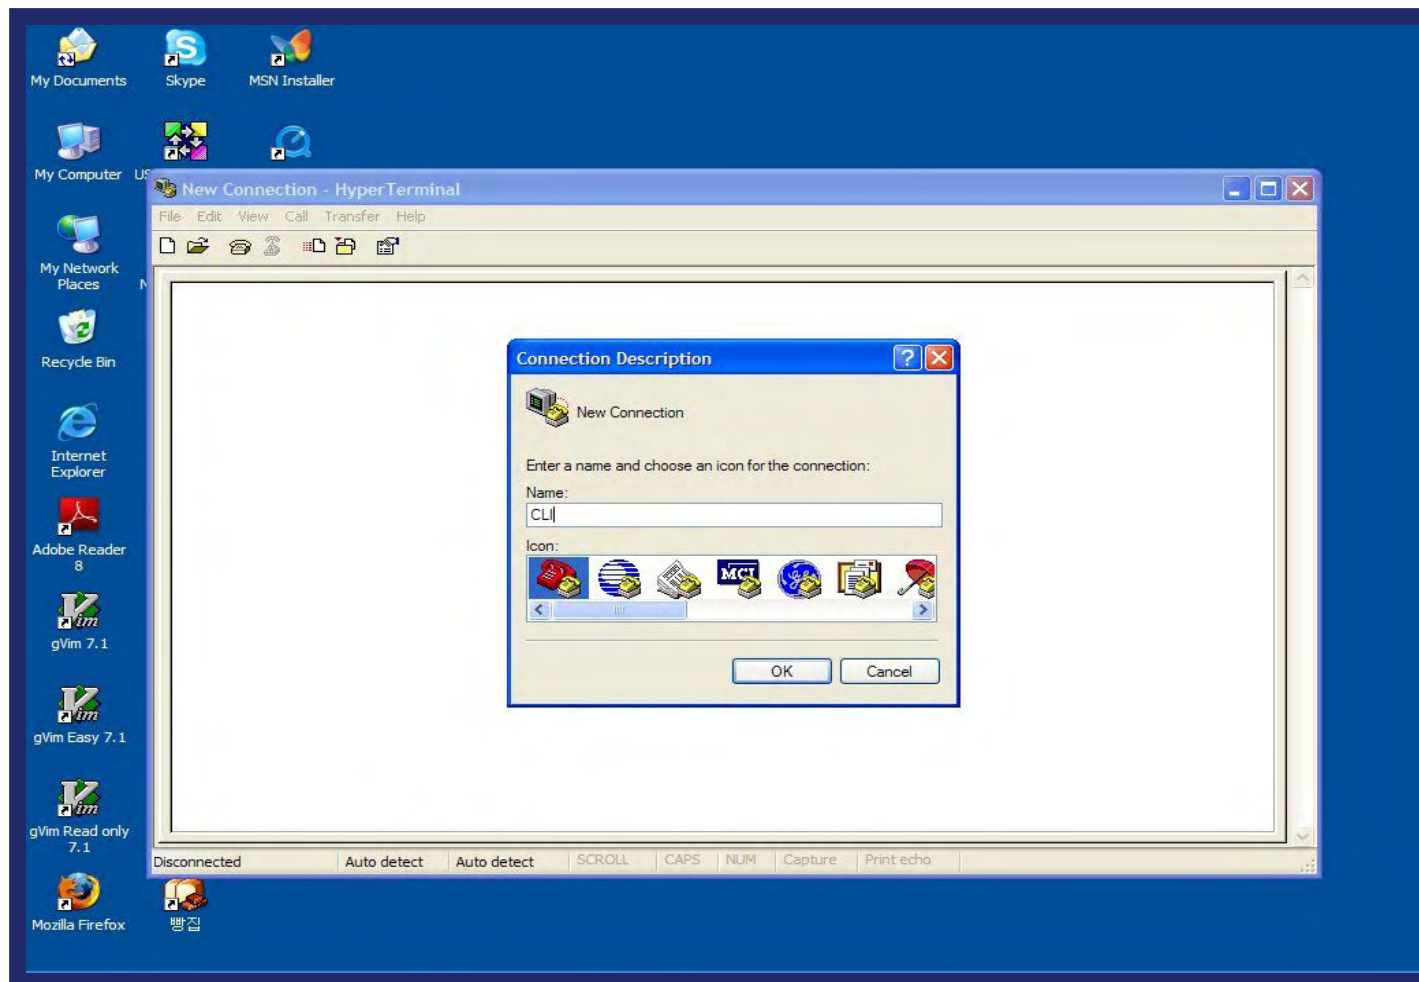

CLI

- “Bit per second” drop down menu, select “115200”.
- “Flow control” drop down menu, select “None”.
- Click “Apply”.
- Click “OK”.

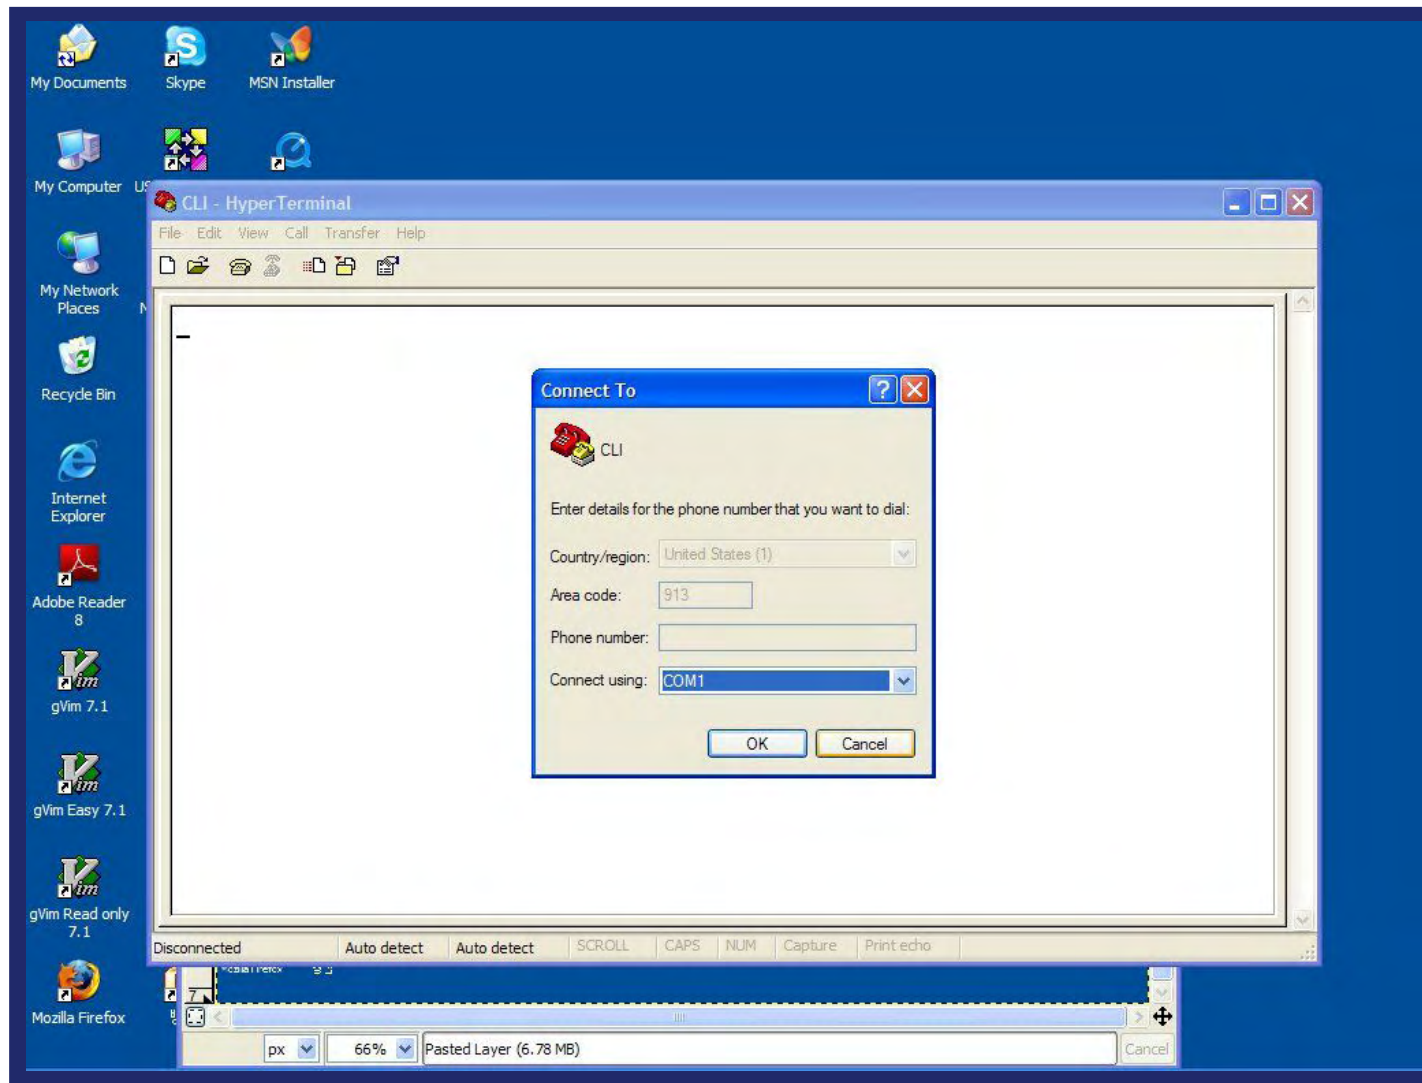

CLI

- To verify and/or change port number, open “Control Panel”, then “System”, then “Hardware Tab”, then “Device Manager”. Double click “Ports”, then double click “Serial Cable” then click “Port Settings” tab, click “Advanced”, in the COM Port drop down menu, select “COM 1”, click “OK”.
- After verification of port number, open HyperTerminal.
- Enter CLI.
- Click “OK”.

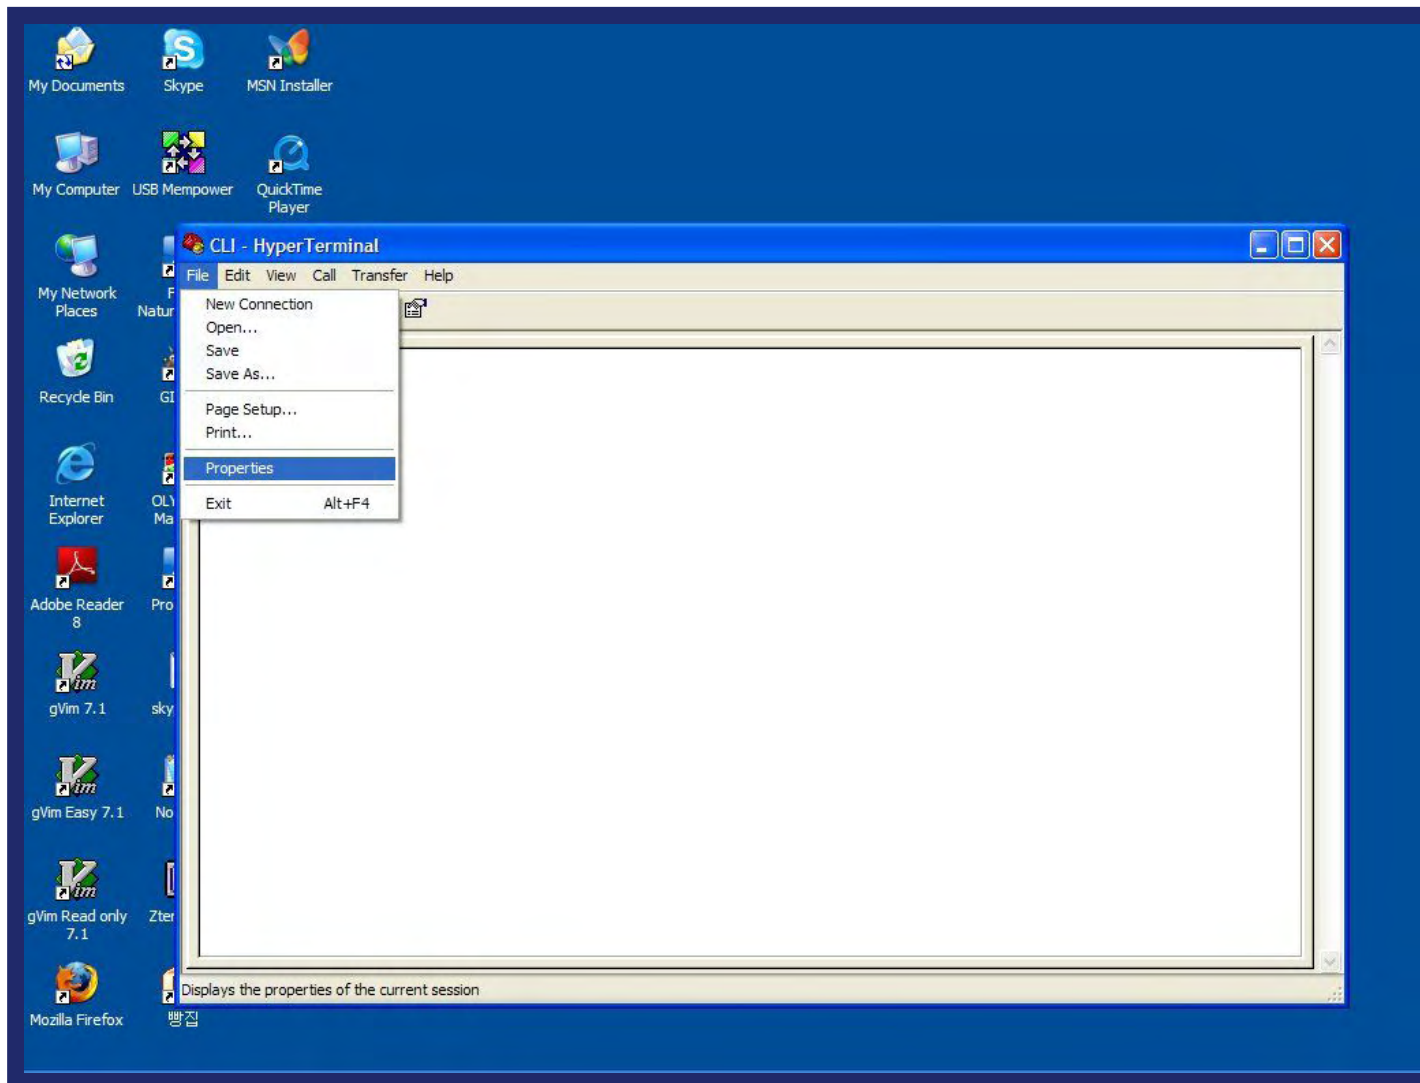

CLI

- In the “Connect using” drop-down menu, select “COM1”.
- Click “OK”.

CLI

- Click “File”, choose “Properties”

CLI

- On “Settings” tab
- “Emulation” drop down menu, select “VT100”
- Click “OK”

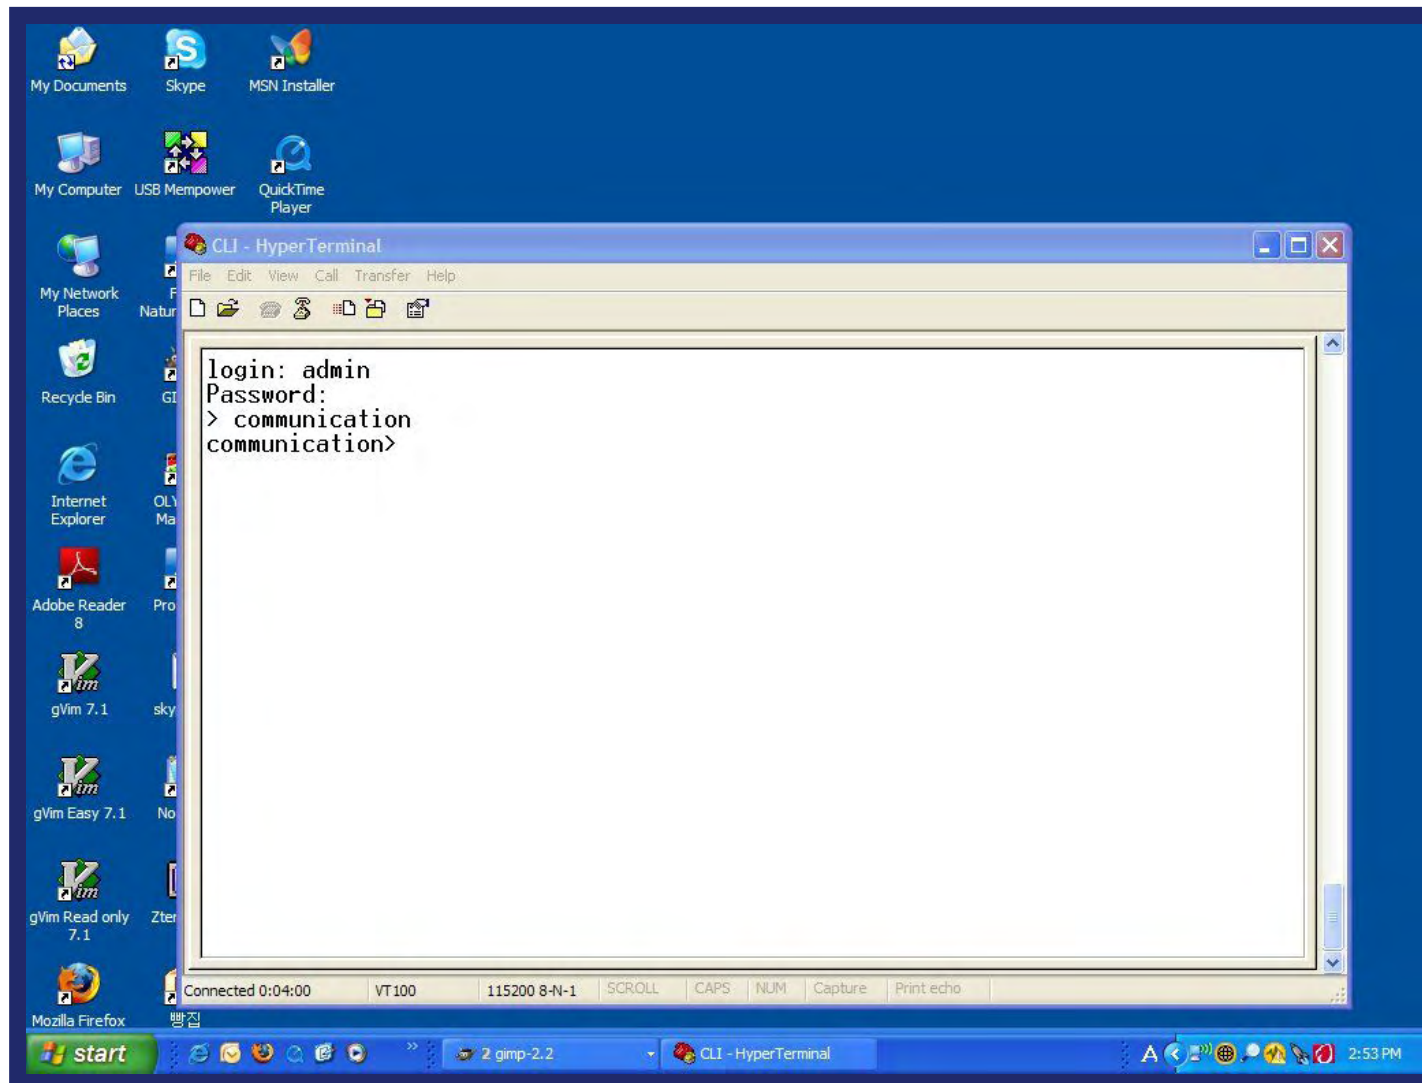

CLI

- In case that you cannot see login prompt, just press enter key several times.
Login is “admin” and Password is “admin”.

CLI

- In order to verify IP network configuration, you should type “communication”.
- Press enter-key.

CLI

- In order to see values, you should type “get all”, and then press Enter-key.
- You can use LAN_Port_IP_Address to access Web UI as described page 17.
- In case DHCP_Server is OFF, after “communication>” enter the following text : “set DHCP_Server ON”, then press enter-key.
- Then enter “commit” text, then press enter-key.

```
CLI - HyperTerminal
File Edit View Call Transfer Help

```

- DHCP ON: Repeater would provide IP address to notebook computer as a DHCP server.
- DHCP OFF: Static IP address will be assigned to repeater.
- Dynamic: Repeater would set to receive IP address from external network equipment.
